

APPMAKER · VIBECODING LAB

Chat or speak your next app idea. AppMaker fills automatically.

Groq powers the brainstorming. Mood boards, vibe meters, and clarifications keep every build aligned with the energy you want—ready for Cursor exports.

VIBE SESSION

Tell AppMaker what you want

 Groq ready

hi

Let's kick-start your app planning journey! We've got a solid template to work with, but there are a few essential details missing. To move forward, could you please share the core name of your app, the problem it solves, and for whom? Additionally, would you like to share any visuals or design preferences to help guide the development process?

name BlueBird, it just shows an image of a blue bird

Let's get started with your BlueBird app! We've made some progress, but there's still a lot to explore. You've shared the core name, but we need more details on the problem it solves and for whom. Additionally, we can discuss visuals - would you like to share any design preferences or images to guide the development process?

thats enough info, make it a simplest thinmg u can, no logins, is a web app that shows a blue bird image

Let's bring BlueBird to life! We've got a simple web app that shows a blue bird image. To move forward, I've filled in some essential fields. Please review and let's discuss visuals and design preferences to guide the development process.

go

Let's bring BlueBird to life! We've got a simple web app that shows a blue bird image. To move forward, I've filled in some essential fields. Please review and let's discuss visuals and design preferences to guide the development process.

i dont see the fields

Let's bring BlueBird to life! We've got a simple web app that shows a blue bird image. To move forward, I've filled in some essential fields. Please review and let's discuss visuals and design preferences to guide the development process.

what?

Let's bring BlueBird to life! We've got a simple web app that shows a blue bird image. To move forward, I've filled in some essential fields. Please review and let's discuss visuals and design preferences to guide the development process.

hello who are u

Let's bring BlueBird to life! We've got a simple web app that shows a blue bird image. To move forward, I've filled in some essential fields. Please review and let's discuss visuals and design preferences to guide the development process.

DROP YOUR IDEA OR FOLLOW-UP

“I want an app that playlists my mood and drafts landing pages for each vibe...”

VIBE METER

High-energy sprint

Calm

65

Electric

Tune how expressive AppMaker should be when it asks clarifying questions and pitches ideas.

CLARIFICATIONS

45

Questions AppMaker still needs you to answer

INSTRUCTIONS · APP PLANNING & REQUIREMENTS GATHERING

Can you describe the key workflow or the “main magic” moment for users?

Example: “You describe an idea; the assistant fills the Instructions/Rules/TODO template automatically.”

Recommendation: Focus on the moment users feel delight—it keeps UX grounded.

INSTRUCTIONS · ESSENTIAL FEATURES

List the must-have features the app requires for a useful MVP.

Example: “Groq-powered chat, voice capture, mood board upload, template autofill, clarification prompts.”

Recommendation: Limit to three or four pillars so v1 ships quickly.

INSTRUCTIONS · ESSENTIAL FEATURES

Which features are nice-to-have or for future versions?

Example: “Shareable exports, project history browser, automated Cursor repo commits.”

Recommendation: Park ideas that don’t unblock day-one usage to avoid scope creep.

INSTRUCTIONS · USER EXPERIENCE

What are the main user roles?

Example: “Owner (you) now; optional guest observers later.”
Recommendation: Start with the single role that must exist; layer on more only when workflows demand it.

INSTRUCTIONS · USER EXPERIENCE

What should each user be able to do?

Example: “Owner can run sessions, tweak vibe meter, export plans; guests can review read-only scopes.”
Recommendation: Tie permissions to concrete flows so nothing ships unused.

INSTRUCTIONS · USER EXPERIENCE

Are there any access restrictions?

Example: “Guests can’t change templates or trigger Cursor exports.”
Recommendation: Document restrictions now—it simplifies future auth wiring.

INSTRUCTIONS · INTEGRATIONS & NOTIFICATIONS

Should the app integrate with external APIs or services?

Example: “Yes: Groq (real) and Cursor account hooks (stub now, real later).”
Recommendation: Call out whether integrations are real or mocked so testing stays honest.

INSTRUCTIONS · INTEGRATIONS & NOTIFICATIONS

For the MVP, do you want real integrations or simulated flows?

Example: “Real Groq endpoints; Cursor export scaffolding with logging until API access is confirmed.”

Recommendation: Choose realism only where it teaches you something today.

INSTRUCTIONS · INTEGRATIONS & NOTIFICATIONS

Should users receive notifications? If yes, how often and for what?

Example: “No emailed alerts yet; in-app reminders when template slots stay empty.”

Recommendation: Skip outbound notifications until a workflow breaks without them.

INSTRUCTIONS · DATA, SECURITY & PRIVACY

What core data or objects are stored?

Example: “Conversation transcripts, filled templates, palette summaries, API usage logs.”

Recommendation: Enumerate data assets so you can review retention/privacy later.

INSTRUCTIONS · DATA, SECURITY & PRIVACY

Should users have privacy settings or profiles?

Example: “Single-owner profile with option to wipe sessions; no public sharing.”

Recommendation: Decide how deletion works now—it’s harder to retrofit.

INSTRUCTIONS · DATA, SECURITY & PRIVACY

Any GDPR or compliance needs?

Example: “Not required now; note for future if guest accounts become public.”

Recommendation: Document “none” explicitly so stakeholders know it was considered.

INSTRUCTIONS · SPECIAL FEATURES

Should users be able to upload media?

Example: “Yes: upload mood board images to steer vibe extraction.”

Recommendation: Mention file types/limits to keep UX expectations clear.

INSTRUCTIONS · SPECIAL FEATURES

Any AI or automation features?

Example: “Groq Whisper transcription, LLM-driven template filling, vibe-tuned clarifications.”

Recommendation: Highlight the single standout automation that defines the experience.

INSTRUCTIONS · SPECIAL FEATURES

Any unique requirements?

Example: “Vibe meter that nudges prompt tone based on palette and mood slider.”

Recommendation: Document quirky touches so they don’t get cut later.

INSTRUCTIONS · DESIGN & BRANDING

Any specific design vision, brand values, colors, or style?

Example: “Neon gradients + synthwave cues; keep it cinematic yet focused.”

Recommendation: Choose two core colors and one accent for a cohesive palette.

INSTRUCTIONS · DESIGN & BRANDING

Should the app support dark/light mode?

Example: “Dark mode default; optional pastel light mode for daylight working.”

Recommendation: Record desired default so theming work stays decisive.

INSTRUCTIONS · ABOUT / PERSONAL TOUCH

Would you like a creator’s note or story section?

Example: “Short note about vibecoding experiments built while looping synthwave.”

Recommendation: Keep it to a paragraph so it feels heartfelt without slowing the flow.

INSTRUCTIONS · ABOUT / PERSONAL TOUCH

Anything personal you want in an "About" screen?

Example: “Timeline of previous vibe projects and a link to inspiration playlists.”

Recommendation: Note any evergreen links so you can keep them updated later.

CURSORMETHODS · DEVELOPMENT RULES

Languages to use?

Example: “TypeScript everywhere (Next.js app + API).”

Recommendation: Align on one primary language to reduce tooling overhead.

CURSORRULES · DEVELOPMENT RULES

Frontend framework preference?

Example: “Next.js App Router with React Server Components.”
Recommendation: Choose the framework you're most productive in for fast iteration.

CURSORRULES · DEVELOPMENT RULES

Styling approach?

Example: “Tailwind CSS 4 + custom theme tokens; utility-first with a sprinkle of CSS vars.”
Recommendation: Document styling rules so collaborators stay consistent.

CURSORRULES · DEVELOPMENT RULES

State management plan?

Example: “Zustand for session state, React hooks for local UI.”
Recommendation: Keep state libraries light unless multiple actors require syncing.

CURSORRULES · DEVELOPMENT RULES

Backend or data layer?

Example: “Next.js Route Handlers; optional Supabase later if persistence needed.”
Recommendation: Choose the minimal backend that supports today’s features.

CURSORRULES · DEVELOPMENT RULES

APIs to connect and which to mock?

Example: “Connect to Groq (real) and scaffold Cursor export (stub).”

Recommendation: List env variables so deployment is straightforward.

CURSORMETHODS · DEVELOPMENT RULES

Testing expectations?

Example: “Playwright path for chat/voice/upload; lint + type checks in CI.”

Recommendation: Specify the critical journeys to regress so tests stay focused.

CURSORMETHODS · DEVELOPMENT RULES

Security guidelines?

Example: “Never expose API keys client-side; rate-limit Groq endpoints; sanitize file uploads.”

Recommendation: Write expectations even if simple—future you will thank you.

CURSORMETHODS · DEVELOPMENT RULES

Performance considerations?

Example: “Lazy-load heavy panels, compress audio uploads, test mobile/desktop flows.”

Recommendation: Mention the most likely bottlenecks so optimizations stay targeted.

CURSORMETHODS · DEVELOPMENT RULES

File organization conventions?

Example: “`src/components`, `src/lib`, `src/state`, `src/app/(routes)`; hyphenated filenames.”

Recommendation: Define structure early to keep contributions orderly.

CURSORMETHODS · DEVELOPMENT RULES

Commit conventions?

Example: “Conventional commits (feat/chore/fix/docs/test).”

Recommendation: Pick a convention that tooling can lint or auto-generate changelogs from.

TODO · DEVELOPMENT CHECKLIST

Project initialization (framework, typings, style)

Example: “Next.js + TypeScript + Tailwind + Zustand scaffold in /appmaker.”

Recommendation: Confirm tooling works locally before moving on.

TODO · DEVELOPMENT CHECKLIST

Set up environment variables and API/DB connection

Example: “.env template with GROQ_API_KEY, CURSOR_API_TOKEN, CURSOR_WORKSPACE_ID.”

Recommendation: Document env requirements in README so onboarding stays fast.

TODO · DEVELOPMENT CHECKLIST

Design database schema (list main models)

Example: “Session, Message, TemplateSnapshot (note: client-only for v1).”

Recommendation: Even if using client state, sketch schema for future persistence.

TODO · DEVELOPMENT CHECKLIST

Implement authentication & user roles

Example: “Owner-only access with optional passcode; plan for guest read-only later.”

Recommendation: Keep auth lightweight until multi-user becomes real.

TODO · DEVELOPMENT CHECKLIST

Build admin/config panel (if applicable)

Example: “Settings drawer to manage API keys, default vibe, export options.”

Recommendation: Centralize settings so they don’t scatter across the UI.

TODO · DEVELOPMENT CHECKLIST

Implement theming (dark/light)

Example: “Dark default with toggle to pastel light variant.”

Recommendation: Wire theme tokens early so components stay consistent.

TODO · DEVELOPMENT CHECKLIST

Build main feature flows (summarize each required flow)

Example: “Idea capture → Groq plan generation → Clarification loop → Template export.”

Recommendation: Outline flows to align development and testing focus.

TODO · DEVELOPMENT CHECKLIST

Create notification system (channels, behavior)

Example: “In-app nudges when TODO fields remain empty after two clarifications.”

Recommendation: Keep notifications in-app until a real need for outbound arises.

TODO · DEVELOPMENT CHECKLIST

User profiles and privacy (settings, permissions, sharing)

Example: “Single profile with data wipe button; no sharing by default.”

Recommendation: Codify privacy posture so every feature respects it.

TODO · DEVELOPMENT CHECKLIST

Any integrations (external API connections, scheduling integration, etc.)

Example: “Groq chat + transcription; Cursor export stub with configurable endpoint.”

Recommendation: Track each integration separately to manage tokens safely.

TODO · DEVELOPMENT CHECKLIST

Implement additional features (describe)

Example: “Vibe meter slider, palette-driven prompt hints, mood board gallery.”

Recommendation: Call out signature touches so they don’t get cut late in the cycle.

TODO · DEVELOPMENT CHECKLIST

Build statistics/dashboard (if needed)

Example: “Session recap showing answered vs. pending template slots.”

Recommendation: Only build analytics if they inform decisions right now.

TODO · DEVELOPMENT CHECKLIST

Create About page/personal story

Example: “Short ‘why AppMaker exists’ note with synthwave playlist link.”

Recommendation: Keep copy modular so you can refresh it as your story evolves.

TODO · DEVELOPMENT CHECKLIST

Add support for unregistered recipients/guests

Example: “Guest link mode that shows read-only templates.”

Recommendation: Flag access boundaries clearly to avoid accidental edits.

TODO · DEVELOPMENT CHECKLIST

Testing & polish (responsive design, UX, etc.)

Example: “Playwright happy path, manual mobile sweeps, ensure contrast meets AA.”

Recommendation: Finish with QA to ensure the vibe feels intentional on every device.

MOOD BOARD

Add visuals to steer AppMaker’s clarifying questions

Drop PNG, JPG, or WEBP (max 6)

AppMaker samples colors + keywords to tune the vibe meter and prompts.

TEMPLATE OUTPUT

Instructions · Rules · TODOs

App Planning & Requirements Gathering

P E N D I N G

Clarify the core purpose and audience before building.

What is your app called?

Example: “AppMaker” keeps the name short and future-proof for dashboards or mobile shells.

Recommendation: Pick a name you can reuse in copy and repo folders; it keeps momentum later.

BlueBird

What core problem does it solve, and for whom?

Example: “It helps indie builders turn napkin ideas into scoped projects ready for Cursor.”

Recommendation: Summarize goal in one sentence so it guides every feature decision.

Displays a blue bird image

Can you describe the key workflow or the “main magic” moment for users?

Example: “You describe an idea; the assistant fills the Instructions/Rules/TODO template automatically.”

Recommendation: Focus on the moment users feel delight—it keeps UX grounded.

Push this plan into your workspace

App name inferred as **BlueBird**. Update the Core Idea · Name field in Instructions to change this before export.

45 clarifications pending. Export anyway or answer them first so your Cursor files ship fully populated.

OPTIONAL NOTE TO INCLUDE WITH EXPORT

E.g. “Kick off neon writer build – align with synthwave palettes.”

Export to Cursor

 Cursor credentials are not configured. Set CURSOR_API_TOKEN and CURSOR_WORKSPACE_ID to enable exports.
